# MongoDB query language

MongoDB query language is based on a concept of pattern matching

A query is expressed as a BSON pattern and all documents that match the pattern are included in an answer

A method `find()` is used to match a pattern with the documents in a collection

```
db.department.find({"age":25})
```

`find()`

Matching of an empty pattern `{ }` with a collection returns the entire collection

```
db.department.find({})
```

`find()`

Finding the first n documents in a collection

```
db.department.find({}).limit(1)
```

`find()`

# MongoDB query language

## A sample document

```
db.department.insert(  
  { "name": "School of Computing and Information Technology",  
    "code": "SCIT",  
    "total_staff_number": 30,  
    "budget": 1000000,  
    "address": { "street": "Northfields Ave",  
                  "bldg": 3,  
                  "city": "Wollongong",  
                  "country": "Australia" },  
    "courses": [ { "code": "CSCI835",  
                    "title": "Database Systems",  
                    "credits": 6 },  
                  { "code": "CSIT115",  
                    "title": "Data Management and Security",  
                    "credits": 6 },  
                  { "code": "CSCI317",  
                    "title": "Database Performance Tuning",  
                    "credits": 6 },  
                  { "code": "CSIT321",  
                    "title": "Software Project",  
                    "credits": 12 }  
                ]  
  }  
);
```

# Simple queries

Find total number of documents in a collection

```
db.department.count()
```

count()

Find all departments whose code is SCIT

```
db.department.find({"code": "SCIT"})
```

find()

Find total number of departments whose code is SOPH

```
db.department.find({"code": "SOPH"}).count()
```

find()

```
db.department.count({"code": "SOPH"})
```

count()

Find all departments whose name is School of Physics and whose code is SOPH

```
db.department.find({"name": "School of Physics", "code": "SOPH"})
```

find()

# Queries with Boolean operations

Find all departments whose name is **School of Physics** or whose code is **SCIT**

```
db.department.find({$or:[{"name":"School of Physics"}, {"code":"SCIT"}]}))
```

[find\(\)](#)

Find all departments whose name is **School of Physics** and whose code is **SOPH**

```
db.department.find({$and:[{"name":"School of Physics"}, {"code":"SOPH"}]}))
```

[find\(\)](#)

Find all departments whose code is either **SCIT** or **SOPH**

```
db.department.find({"code":{"$in":["SCIT", "SOPH"]}}))
```

[find\(\)](#)

Find all departments where **budget > 10000**

```
db.department.find({"budget":{"$gt":10000}}))
```

[find\(\)](#)

# Boolean expressions

Comparison `"key"="value"`

```
{"key": "value"}
```

Boolean expression

```
{"key": {$eq: "value"}}
```

Boolean expression

Comparison `"key" > "value"`

```
{"key": {$gt: "value"}}
```

Boolean expression

Disjunction `("key1"="value1") or ("key2"="value2")`

```
{$or: [{"key1": "value1"}, {"key2": "value2"}]}
```

Boolean expression

Conjunction `("key1"="value1") and ("key2"="value2")`

```
{$and: [{"key1": "value1"}, {"key2": "value2"}]}
```

Boolean expression

# Boolean expressions

Boolean expression `(( "key1"="value1" ) or ( "key2"="value2" ) ) and ( "key3"="value3" )`

```
{ $and: [ { $or: [ { "key1": "value1" }, { "key2": "value2" } ] }, { "key3": "value3" } ] }
```

Boolean expression

Negation of a comparison `"key" not = "value"`

```
{ "key": { $not: { $eq: "value" } } }
```

Boolean expression

Negation of an expression `not ( ( "key1"="value1" ) or ( "key2"="value2" ) )`

```
{ $nor: [ { "key1": "value1" }, { "key2": "value2" } ] }
```

Boolean expression

Negation `not ( "key1"="value1" )`

```
{ $nor: [ { "key1": "value1" } ] }
```

Boolean expression

# Queries on nested documents

Find all departments located in Wollongong

```
db.department.find({"address.city":"Wollongong"})
```

find()

Find all departments that offer a course that has a code **SOA101**, title **Astronomy for Kids** and it is worth **3** credits

```
db.department.find({"courses":{"code":"SOA101",  
                                "title":"Astronomy for Kids",  
                                "credits":3}})
```

find()

Find all departments that offer the courses **SOA101**, **SOA201**, **SOA301**, with titles **Astronomy for Kids**, **Black Holes**, **Dark Matter**, and credits **3**, **6**, and **12** respectively

```
db.department.find({"courses":[{"code":"SOA101","title":"Astronomy for Kids", "credits":3},  
                               {"code":"SOA201", "title":"Black Holes", "credits":6},  
                               {"code":"SOA301", "title":"Dark Matter", "credits":12}]})
```

find()

# Queries on nested documents

Find all departments such that **the second** offered course has code **SOA201**, title **Black Holes** and it is worth **6** credits

```
db.department.find({"courses.1":{"code":"SOA201","title":"Black Holes","credits":6}})
```

find()

Find all departments that offer courses worth more than 12 and less than 18 credits

```
db.department.find({"courses.credits": {$gt:12, $lt:18}})
```

find()

Find all departments such that **the first** offered course is worth 6 credits

```
db.department.find({"courses.0.credits":6})
```

find()

# Queries on nested documents

Find all departments such that **the first** offered course is worth less than 6 credits

```
db.department.find({"courses.0.credits":{"$lt:6}})
```

[find\(\)](#)

Find all departments such that **any** offered course is worth less than 6 credits

```
db.department.find({"courses.credits":{"$lt:6}})
```

[find\(\)](#)

Find all departments such that offer Quantum Mechanics course worth 6 credits

```
db.department.find({"courses.credits":6,"courses.title":"Quantum Mechanics"})
```

[find\(\)](#)

# Query operators on array

Array equal to `[1,2,3,4,5]`

```
{ "array": { $all: [1,2,3,4,5] } }
```

find()

Array includes an element that satisfies a condition

```
{ "array": { "$elemMatch": { $eq: 2 } } }
```

find()

```
{ "array": { "$elemMatch": { $gt: 2, $lt: 4 } } }
```

find()

Size of an array

```
{ "array": { $size: 5 } }
```

find()

# Projections

Find name and code of each department

```
db.department.find({ }, {"name":1, "code":1})
```

[find\(\)](#)

find() name and code of each department and do not include document identifier `_id` into an answer

```
db.department.find({ }, {"name":1, "code":1, "_id":0})
```

[find\(\)](#)

Find all **key:value** pairs describing each department except `name`, `code` and `_id`

```
db.department.find({ }, {"name":0, "code":0, "_id":0})
```

[find\(\)](#)

Find all **key:value** pairs describing each department except course `credits`, course `code`, and `_id`

```
db.department.find({ }, {"courses.credits":0, "courses.code":0, "_id":0})
```

[find\(\)](#)

# Queries about nulls and missing keys

Find all departments that have no **budget**

```
db.department.find({"budget":null})
```

[find\(\)](#)

Find all departments that have a **budget**

```
db.department.find({"budget":{"$not": {"$eq:null"}}})
```

[find\(\)](#)

Find all departments that have no key **name** in their description

```
db.department.find({"name":{"$exists:false"}})
```

[find\(\)](#)

Find all departments that have key "name" in their description

```
db.department.find({"name":{"$exists: true }})
```

[find\(\)](#)

# Queries about nulls and missing keys

Find all departments that have no **code** of a **course**

```
db.department.find({"courses.code":{"$exists:false"}})
```

[find\(\)](#)

```
db.department.find({"courses.code":{"$not":{"$exists:false"}}})

# Iterations over a cursor

Display the first 20 departments

```
db.department.find({})
```

find()

Display the next 20 departments

```
it
```

cursor

Create a cursor and display all documents in a cursor

```
var cursor = db.department.find({})  
cursor
```

cursor

```
var cursor = db.department.find({})  
while(cursor.hasNext()) { print(tojson(cursor.next())); }
```

cursor

```
var cursor = db.department.find({})  
cursor.forEach(printjson)
```

cursor

## Iterations over a cursor

Use a cursor to list names and budgets of all departments whose budget is greater than 1000

```
var cdept=db.department.find()  
cdept.forEach(function(x)  
  { if (x.budget > 1000 ) {print(x.name, x.budget)}});
```

[cursor](#)

Saving the results in an array

```
var cursor = db.department.find({})  
var CursorArray = cursor.toArray();  
var document = CursorArray[2];  
printjson(document)
```

[cursor](#)
